EDUCATION

Bachelor of Science in Computer Engineering

Old Dominion University
Concentration: Hardware Systems
Minor: Computer Science
Graduated December 2025
GPA: 3.23

Associate of Science in Engineering

Brightpoint Community College
Graduated 2023
GPA: 3.54 | Magna Cum Laude

SKILLS

Programming and Languages:

C++, Java, MATLAB, VHDL, PLC, SCADA

Embedded & Hardware Systems:

ARM microcontrollers, FPGA development

Digital & Electrical Engineering:

Digital logic design, Circuit analysis, finite state machines, hardware/software integration

Tools & Software:

Quartus, ModelSim, Aldec, Inventor, Oscilloscope, Multimeter

Systems & Debugging:

System-level troubleshooting, hardware validation

PROFESSIONAL OVERVIEW

Computer Engineering graduate specializing in hardware systems with hands-on experience in FPGA design, embedded systems, VHDL, ARM microcontrollers, and circuit analysis. Experienced in hardware/software integration, digital logic design, and real-time systems through academic and research projects, including HPC node development funded by Jefferson Lab. Seeking an entry-level computer or embedded systems engineering role.

ENGINEERING PROJECTS

Hybrid Supercomputing Node (Capstone Project)

Old Dominion University | Funded & Mentored by Jefferson Lab

- Developed and evaluated methods for node manipulation and control within a high-performance computing (HPC) environment.
- Worked on hardware/software integration to improve system efficiency, reliability, and fault tolerance.
- Analyzed node-level behavior and resource interactions to support scalable and resilient computing architectures.

Embedded Microcontroller Systems

- Programmed ARM-based microcontrollers for real-time sensor data acquisition.
- Designed and tested voltage-regulated circuits to interface with external peripherals.
- Implemented low-level software to manage I/O timing and data flow between hardware components.

FPGA & VHDL Digital Design Projects

- Designed and implemented a fully functional 8-bit calculator, stopwatch, and smart irrigation system on FPGA hardware using VHDL language.
- Developed finite state machines and control logic using switches and push-button inputs.
- Verified designs through simulation and hardware testing using ModelSim, Quartus, and Aldec software.
